

NEW RANGE OF CV BRAKE PADS NON ProTecS®

As a trusted partner serving the commercial vehicle market, Beral offers technologically advanced products and solutions that support reliable, efficient, and safe braking performance across a wide range of applications.

As you may know, Beral Premier CV Brake Pads feature the industry-best Knorr-Bremse ProTecS® system, an OE preferred technology comprising a permanent, welded connection between the spring and brake pad backplate.

To better serve all segments of the market, especially older applications, we are pleased to introduce three new **Beral CV Pads featuring a standard clamped spring design. These new items include made-in-Europe R90-homologated friction materials along with high-quality Knorr-Bremse accessories.**

BERAL PART NUMBER	WVA*	BRAKE SYSTEM(S)	POPULAR APPLICATIONS
BCV29087TK	29087	Knorr-Bremse SB/SN7	DAF, IVECO, JOST, MAN, MB, Neoplan SAF, Scania, Setra
